Rooting:
Start/rooting;
hydrate substrate.

Vegetative phase I:
Plants develop in
volume.

Vegetative phase II:
Up to growth
stagnation after
fructification or
appearance of the
formation of flowers.

Generative phase I:
Flowers or fruits
develop in length.
Growth in height
achieved.

Generative phase II:
Development of
the volume (breadth)
of flowers or fruit.

Generative phase III:
Development of
the mass (weight)
of flowers or fruit.

Generative phase IV:
Flowers or fruit
ripening process.

This cultivation schedule is intended for plants that develop flowers or fruits, starting from a one-week-old cutting or seedling. The duration of each phase depends on crop species, cultivar, desired plant size and/or plants per m².

* Double CANNAZYM dosage to 19 ml/gallon, if substrate is reused.

** Increase to a maximum of 15 ml/gallon through flowering for extra strength.

For a longer flowering phase, repeat the recommended dosages from Generative Phase I (W3-W5). Add CANNA PK 13/14 in the period 3-4 weeks before harvest.

Recommended pH is between 5.5 and 6.2.

To set your plants up very early on as a cutting or seedling, check out CANNA Start. This is to be used prior to commencing the grow guide above.
