

CANNA

The solution for growth and bloom

CANNA CONTROL

CANNA Control is the simple, consistent, low input pest management solution that effectively manages a wide range of pests, including botrytis, mildew, mites, thrips, bacteria, aphids, gnats, and whiteflies. With a relatively low application rate, growers use less while maintaining control and crop quality.

CANNA Control is naturally derived and made of only three ingredients. It is suitable for greenhouses, nurseries, fruit and vegetable crops, orchards, tree fruit, vineyards, hops, clones, and agricultural hemp.

ADVANTAGES OF CANNA CONTROL

- + Made from naturally derived ingredients
- + Made from only three ingredients
- + Relatively low use rate, high efficiency
- + Preventative and curative foliar spray
- + Effective for a wide range of pests and diseases
- + Two convenient sizes:
 - 1L (33 fl oz)
 - 0.25L (8.25 fl oz)

WHEN TO APPLY CANNA CONTROL

- + Apply to well-hydrated plants once per week as needed
- + Can be used during vegetative and flowering. However, flowers may be more sensitive to sprays containing the product
- + Spray late in the evening or on cloudy days, when plants are not exposed to intense or direct sunlight or artificial lighting

INSTRUCTIONS FOR CANNA CONTROL USE

1. Shake the concentrate well before use.
2. **Dilution Rates:**
 - Preventative Application 0.5 oz / gal
 - Mild Outbreaks 1 oz / gal
 - Severe Outbreaks up to 2 oz / gal*

***RISK OF BURN IS HIGHER AT INCREASED CONCENTRATION**
3. Shake the diluted product well to ensure good dispersion. Dilution should have a consistent cloudy appearance, prior to use.
4. Use the diluted product as a foliar spray. Make sure the affected area is thoroughly covered. Try to avoid sensitive parts of the plant (like flowers) if they are not affected by the outbreak.
5. Apply the product after dilution, or agitate the diluted product again before application.
